

# PROCESS CHART for DATA COLLECTION(Lesson 5)

**DEI will have some clam containers sieved and ready to measure so that more groups can start at once if the group is larger. The plan would be that 4 groups could be at the sieving station, up to 15 groups (depending on the size of the class or school) could be measuring and writing down the data from the sieved bags, and 1 group could be adding data to the big chart.**
